Abstract: Ways and stages of implementation of the development strategy "Uzbekistan-2023", step-by-step implementation of plans and promising projects, changes in the education system and opportunities given to young people were discussed from the perspective of young people. Also, the specific aspects of educational system reforms, scientific development and innovative reforms and the fact that they are an urgent issue of the society are discussed.

Keywords: modern, information technology, strategy, expert, society, constitution, directions, development, concept, intensive, innovative, project.

Adoption of the newly revised Constitution of the Republic of Uzbekistan by popular vote in the referendum held on April 30, 2023 served to strengthen the constitutional foundations of the establishment of New Uzbekistan.

Adoption of the newly revised Constitution of the Republic of Uzbekistan by popular vote in the referendum held on April 30, 2023 served to strengthen the constitutional foundations of the establishment of New Uzbekistan.

The new development path of Uzbekistan was discussed and approved by the general public during the development of the "Uzbekistan - 2030" strategy.

The "Uzbekistan - 2030" strategy embodies several main ideas:

Taking a place among countries with higher-than-average income through stable economic growth;

Organization of the education, medical and social protection system that fully meets the requirements of the time and international standards;

- creation of favorable environmental conditions for the population;
- establishment of a fair and modern state in the service of the people;
- is to guarantee the sovereignty and security of the country.

Implementation of the "Uzbekistan - 2030" strategy and the achievement of its target indicators should be set as the highest priority of the education system, and modern pedagogues should be educated in accordance with the requirements of the times.

Within the framework of the "Uzbekistan - 2030" strategy, the head of our state, Shavkat Mirmonovich Mirziyoyev, has decided to ensure the achievement of all important goals and the fulfillment of important tasks, which are set in the development strategy of New Uzbekistan and continue to be implemented.

Increasing the efficiency of teaching in modern lesson processes, using modern technologies and methods in teaching students increases the efficiency of learning lessons, and helps them learn quickly.

The concept of the development of the public education system of the Republic of Uzbekistan until 2030 stipulates the introduction of modern information and communication technologies and innovative projects in the education system. At the same time, the state education standards are based on the competency approach, teaching and evaluation methods, as well as the transfer of textbooks and other educational materials mainly to digitized technologies, the development of independent use and analysis skills of information technologies and other skills. , improvement of the quality of used textbooks, use of foreign textbooks as additional or alternative educational materials, and introduction into practice.

It is determined that the teaching process of foreign languages and information and communication technologies should be used as a methodical tool.

Another advantage of the use of information technology in the educational process is that it is a requirement of today's time for us students to be familiar with all new innovative information and express our opinions independently.

Nowadays, in the age of technology, which is accelerating, it is more effective and interesting to conduct classes with new pedagogical information.

Including the use of new pedagogical information and techniques in our country of knowledge is an example of this.

In the image of a modern teacher, we imagine pedagogues who are well-versed in information and communication technologies, who can organize a modern lesson process, and who can use advanced technologies. Today, it is one of the most important tasks of our country to provide education to young people, to prepare them at the level of mature and qualified staff who meet the requirements of state education standards in all aspects. "Formation of an excellent system of personnel training based on the rich intellectual heritage of the people and universal values, on the basis of the achievements of modern culture, economy, science, technology and technology is an important condition for the development of Uzbekistan"

As in any society, in the conditions of the economy of the development of our republic, it is important to train qualified specialists who can withstand competition. After all, the importance of the factor of professional personnel training in the development of society is a fact of life that does not require proof.

In recent years, large-scale work has been carried out and continues in our republic regarding the training of specialist personnel, improving its quality and efficiency.

Building a developed society, designing high-level technical solutions based on the latest advances in science and technology, and training creative specialists who can create high-tech devices are directly related to educational progress. In particular, the supply of creative engineers-designers to production is carried out in several higher technical education institutions in our republic, and graphic training, which is a means of realizing one's thoughts and ideas, plays an important role in the professional activity of these specialists.

In the system of higher technical education, a number of scientific and research works are being carried out to improve the content of graphic education and increase the quality of teaching.

Also, in the educational process, the formation of graphic literacy of students using computer technology is one of the urgent problems. It is noteworthy that it is achieving its effectiveness.

Thus, based on the results of the current analysis, it can be concluded that, despite the fact that several scientific studies have been conducted on the improvement of graphic education and the use of computer technology in this field, graphic education is based on the use of modern advanced pedagogical technologies. The pedagogical foundations and didactic conditions of the intensification problem have not been developed.

As mentioned above, training of future teaching specialists in computer graphics in the higher education system is carried out by studying the current state of study plans, programs and existing scientific and methodological literature.

The following are the measures for the implementation of the "Uzbekistan - 2030" strategy in 2023-2024 in the regions:

- Formation of elementary computer literacy skills in students by providing state pre-school education organizations with 100 percent computer classes;

- Formation of elementary computer literacy skills in students by providing state pre-school education organizations with 100 percent computer classes;

- Creation of about 700 new textbooks, workbooks, methodical manuals for pedagogues and mobile applications;

- Creation of 1000 multimedia programs for tablets based on new generation textbooks;

- Sending 1,000 educators and teachers to foreign countries for training and internship;

- Increasing the quality of education and improving the material and technical base in 700 professional educational institutions;

- Bringing the level of inclusion of young people to higher education to at least 50%;

- Full provision of general secondary education organizations with highly educated pedagogic personnel;

- To achieve the inclusion of 10 higher education institutions in the rating of the most prestigious "Top-1,000" higher education organizations of the world;

•Increasing the effectiveness of scientific research in higher education institutions and increasing the scientific potential to 70%;

Broad implementation of innovative activities in all directions, support of scientific research and innovative initiatives;

•Increase the number of IT-park residents by 10 times, increase the share of services provided by them in the GDP to 2.2%, and increase the number of jobs created in them to 100,000;

•Increasing the number of representative offices of foreign companies to 1000 by establishing the "International Center of Digital Technologies" for foreign companies in the IT park;

•The startup has set itself the goal of releasing the first (Unicorn) startup project worth 1 billion dollars to increase the national market capitalization by supporting the projects through the acceleration (development) program of the IT park.

(Appendix 1 as amended by Decree of the President of the Republic of Uzbekistan No. PF-214 of December 25, 2023 — National Legislative Information Database, 12/29/2023, No. 06/23/214/0984)

The president of our state has the following sayings: "If what bothers you about me?" If you ask, I will answer that it is the education and upbringing of our children.

Our conclusion is that in every developing country, the main focus is on education. Specific goals are set for development. It is no exaggeration to say that the "Uzbekistan-2030" strategy is one of the best plans. After all, the stability, growth and development of our country undoubtedly depends on the education system and the intellectual potential of young people.
